Full-Stack JavaScript Engineer
in Magdeburg

If you'd like to work with new technologies like Angular 2 and node.js on a daily basis and working in a great team is important to you, you've come to the right place: Because we're developing SciFlow. SciFlow is a web-based software that allows researchers to create and publish remarkable scholarly documents. Join us in changing the way researchers work - together.

You're role - a typical work day

- You plan and specify features for the front- or backend together with the team.
- You implement features and use the newest web technologies like Angular 2 and node.js on a daily basis.
- You help us detecting bugs as soon as possible and make sure that your code is easy to read and reviewed.

Your profile - our expectations of you

- You have completed a computer science related degree and you'd love to work in a startup that is international and distributed.
- You already have experience with JavaScript as well as HTML/CSS and modern browser technologies.
- Experience with TypeScript, Web Sockets, RxJS, Angular 2, Docker, CouchCB, node.js, Microservice architectures and work expertise in an agile team are a plus.

Benefits - your expectations of us

- We are an experienced team that can help you advance and that is open to your ideas.
- We do not just offer a job but the opportunity to play a significant role in making SciFlow and you successful.
- We have a flexible work environment and transparent development processes, which will help you getting started.
- Team spirit, Club Mate, Team events and ping pong competitions are a given.

What now?

If you'd like to know more, visit our website at en.sciflow.net/career for more information on SciFlow and the team. Please send your CV to together@sciflow.net. We're looking forward to it.
